-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 09 February 2004.
- 2a) ☒ This action is FINAL. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 2/9/04 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-8, 10-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Silverman et al.

At the outset, it is noted that similar claims will be grouped together to avoid repetition in explanation.

As broadly drafted, these claims do not define any structure/step that differs from Silverman et al. With regard to claims 1, 2, and 12, Silverman et al. discloses an apparatus for coupling a peripheral device to a host comprising: an interface circuit (comprising a SIE 206 and USB Interface 204) configured to receive a request from the host (also "host" in Silverman et al.) and present a response to the host; and a logic

circuit (it is clear that in Silverman et al., USB logic according to standard USB Specification is used since the device of Silver man is a USB device) configured to generate said response when the request is serviceable by the apparatus or pass the request to an external circuit (208, for example) when the request is not serviceable by the apparatus. See also Figs. 3 and 4 and description thereof.

With regard to claims 3 and 4, it is clear that the external circuit optionally comprises an ASIC. With regard to claim 5, it is clear that the apparatus comprises a universal serial bus (USB) peripheral device (also "peripheral" in Silverman).

With regard to claim 6, the logic circuit (see above) is configured to generate the response to the request using information received from the external circuit (208, for example). See also Figs. 3 and 4 and description thereof).

With regard to claim 7, it is clear that the USB device of Silverman must strictly adhere to USB Protocol set forth in the standard USB Specification. Therefore, a descriptor table must be used in Silverman et al.

With regard to claim 8, it is clear that the USB device of Silverman must strictly adhere to USB Protocol set forth in the standard USB Specification. Therefore, an enumeration request must be performed in Silverman et al.

With regard to claim 10, it is clear from Silverman that the logic circuit (see above) is configured to pass to the external circuit (208) a request selected from the group consisting of a class request, a vendor request, a custom driver request, and requests implemented to support USB specification changes and enhancements.

With regard to claim 11, the USB device of Silverman must strictly adhere to USB Protocol set forth in the standard USB Specification. Therefore, the response from the external circuit to USB interface circuit to host must comprise a so-called "stall" signal.

The handshake can be either:

- ACK: the request is "serviceable."
- NAK: the request is not "serviceable."
- STALL: The specific endpoint is halted or the specific SETUP command is not supported.

With regard to claims 13-20, it is clear that one using the apparatus of Silverman et al. would have performed the same steps set forth in claims 13-20. Note also that the so-called "response" can be passed either directly from the Silverman et al.'s interface circuit or from Silverman et al.'s external circuit.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Silverman et al.

Silverman et al., as explained above, discloses the claimed invention. However, Silverman does not disclose that the USB "request" conforms to USB 2.0 (chapter 9). It would have been obvious to one of ordinary skill in the art at the time the invention was made to upgrade the USB system of Silverman et al. from USB 1.0 to USB 2.0, since the Examiner takes Official Notice that the use of USB 2.0 is old and well-known; and upgrading the USB system of Silverman et al. from USB 1.0 to USB 2.0 only involves ordinary skill in the art for the purpose of increasing the data transfer speed, for example. If the Applicants choose to challenge the fact that USB 2.0 is old and well-known, supportive document(s) will be provided upon request.

Response to Arguments

Applicants' arguments filed 2/9/2004 have been fully considered but they are not persuasive.

At the outset, Applicants are reminded that claims subject to examination will be given their broadest reasonable interpretation consistent with the specification. *In re Morris*, 127 F.3d 1048, 1054-55 (Fed. Cir. 1997). In fact, the "examiner has the duty of police claim language by giving it the broadest reasonable interpretation." *Springs Window Fashions LP v. Novo Industries, L.P.*, 65 USPQ2d 1862, 1830, (Fed. Cir. 2003). Applicants are also reminded that claimed subject matter not the specification, is

the measure of the invention. Disclosure contained in the specification cannot be read into the claims for the purpose of avoiding the prior art. *In re Sporck*, 55 CCPA 743, 386 F.2d, 155 USPQ 687 (1986).

With this in mind, the discussion will focus on how the terms and relationships thereof in the claims are met by the references. Response to any limitations that are not in the claims or any arguments that are irrelevant and/or do not relate to any specific claim language will not be warranted.

The Silverman 102 Rejection:

With regard to claims 1, 12, and 13, Applicant argued that Silverman does not disclose "automatically generate the response when the request is serviceable by the logic circuit." Contrary to Applicant's argument, the device of Silverman is a USB device and therefore, must be in full compliance with USB logic according to the standard USB Specification. According to USB logic, transactions can be from host to device and from device to host. Each transaction is composed usually from three phases:

Token phase: the host initiates token indicating the future transaction type.

Data phase: the actual data is transmitted through packet. The data direction matches the direction indicated by the token that was transmitted previously.

Handshake phase: the device will automatically respond by a handshake packet indicating the success or failure of the transaction, or in another word, indicating whether the request is serviceable or not.

The 103 Silverman 103 Rejection:

Applicant did not separately argue the 103 Rejection.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Any inquiry concerning this communication should be directed to Khanh Dang at telephone number 703-308-0211.
